

# MATERIAL CONSUMPTION & PRODUCTION TRACKING

## Automatically Capture and Track Material Consumption and Production

The MAPLE Suite Material Consumption & Production Tracking (MCPT) component enables the connection between your ERP and the factory floor. The process order, including the bill of material, is downloaded from your ERP. MAPLE Suite tracks actual production and consumption against the process order and bill of material, and can provide real time upload of this data to your ERP. Final process order confirmation can be automatic or manual.

# MATERIAL CONSUMPTION & PRODUCTION TRACKING

## Key Features

- Automated capture and tracking of material consumption and production.
- Highly configurable and adaptable to a variety of operations.
- Tracks real time material usage.
- Provides Direct Goods Issue (DGI) to your ERP.
- Tracks real time production.
- Provides Direct Goods Receipt (DGR) to your ERP.
- Eliminates manual data entry.
- Provides timely focused information flow.

## Benefits

- Real time production tracking through Direct Goods Receipt to your ERP.
- Real time consumption tracking through Direct Goods Issues to your ERP.
- Close out process orders with accurate confirmations immediately upon completion.
- Eliminates manual entry and human error.
- Accurate material inventory planning provided by real time inventory levels in your ERP.
