

COMPONENT: QUALITY DATA SYSTEM REPORT: REAL TIME CONFIDENCE REPORT

The Real Time Confidence Report quickly provides relevant data for use during shift change meetings. RTCR uses a time-based navigation, line selection and content-specific tabs to enable line users to quickly arrive at the desired state of data. The dashboard is configurable and can be directed at any locally hosted file or web application. The Line Event Data System contains multiple tabs covering multiple KPIs. The Quality Data System contains tabs focused on pass/fail analysis of a configurable set of quality checks which results in an aggregate single page of overall quality status and possible defect details.
