

We are the least expensive provider of proven Manufacturing Execution Systems. In fact, we are so unique in our pricing structure that we offer a pilot line or taste-testing option so you can get to know us better. It is not our objective to make any money on our pilot line concept.

For Pilot Lines – Licensing, Maintenance and Support have all been discounted by 83%. Typically our Installation and Integration are charged on a time and materials basis, but we will extend to you a fixed price for your pilot line.

Our travel estimate is capped and if we go over that cap, we suffer the consequences. If we are under our travel estimate, we will only bill you for the actual amount. Our camera and recording systems designed to visually indicate the root causes of a line failure or unexpected stop is the highest quality, lowest cost system in the market place.

OUR PRICING IS BASED ON SIX SPECIFIC AREAS

- Licensing
- Maintenance and Support
- Training
- Integration and Implementation
- Optional Camera System
- Travel

While we boast 12 components of our MES Platform, manuFACT, our pilot line pricing typically includes our Line Event Data System (LEDS), our Downtime Viewer (DTV), our preventive maintenance component known as Clean, Inspect and Lubricate (CIL) and our Centerline (CL) component.

A typical manufacturing line with appropriate Programmable Logic Controllers can be tested for a very minimized investment fee:

Licensing 4 Components	\$ 4,000.00
Implementation and Integration	\$21,000.00
Annual Maintenance and Support	\$ 800.00
Training	\$ 2,000.00
Travel	\$ 1,000.00
Camera and Recording System	\$ 8,000.00
Total Pilot Line Pricing	\$35,400.00

Please note: A 5% discount is available if the entire amount is paid "up-front".
